Integrations by component

Document loader integrations

Copy page

Document loaders provide a **standard interface** for reading data from different sources (such as Slack, Notion, or Google Drive) into LangChain's Document format. This ensures that data can be handled consistently regardless of the source.

All document loaders implement the `BaseLoader` interface.

Interface

Each document loader may define its own parameters, but they share a common API:

- `load()` – Loads all documents at once.
- `lazy_load()` – Streams documents lazily, useful for large datasets.

```
from langchain_community.document_loaders.csv_loader import CSVLoader

loader = CSVLoader(
    ...  # Integration-specific parameters here
)

# Load all documents
documents = loader.load()

# For large datasets, lazily load documents
for document in loader.lazy_load():
    print(document)
```

LangChain Docs

›

Document Loader	Description	Package/API
Web	Uses urllib and BeautifulSoup to load and parse HTML web pages	Package
Unstructured	Uses Unstructured to load and parse web pages	Package
RecursiveURL	Recursively scrapes all child links from a root URL	Package
Sitemap	Scrapes all pages on a given sitemap	Package
Spider	Crawler and scraper that returns LLM-ready data	API
Firecrawl	API service that can be deployed locally	API
Apify Dataset	Load documents from Apify datasets	API
Docling	Uses Docling to load and parse web pages	Package
Hyperbrowser	Platform for running and scaling headless browsers, can be used to scrape/crawl any site	API
AgentQL	Web interaction and structured data extraction from any web page using an AgentQL query or a Natural Language prompt	API

PDFs

The below document loaders allow you to load PDF documents.

Document Loader	Description	Package/API
PyPDF	Uses `pypdf` to load and parse PDFs	Package
Unstructured	Uses Unstructured's open source library to load PDFs	Package
Amazon Textract	Uses AWS API to load PDFs	API

LangChain Docs

›

PyPDFDirectry	Load a directory with PDF files	Package
PyPDFium2	Load PDF files using PyPDFium2	Package
PyMuPDF	Load PDF files using PyMuPDF	Package
PyMuPDF4LLM	Load PDF content to Markdown using PyMuPDF4LLM	Package
PDFMiner	Load PDF files using PDFMiner	Package
Upstage Document Parse Loader	Load PDF files using UpstageDocumentParseLoader	Package
Docling	Load PDF files using Docling	Package
UnDatasIO	Load PDF files using UnDatasIO	Package
OpenDataLoader PDF	Load PDF files using OpenDataLoader PDF	Package

Cloud providers

The below document loaders allow you to load documents from your favorite cloud providers.

Document Loader	Description	Partner Package	API reference
AWS S3 Directory	Load documents from an AWS S3 directory	❌	`S3DirectoryLoader`
AWS S3 File	Load documents from an AWS S3 file	❌	`S3FileLoader`
Azure AI Data	Load documents from Azure AI services	❌	`AzureAIDataLoader`
Azure Blob Storage	Load documents from Azure Blob Storage	✅	`AzureBlobStorageLoader`

LangChain Docs

Google Cloud Storage Directory	Load documents from GCS bucket	✅	`GCSDirectoryLoader`
Google Cloud Storage File	Load documents from GCS file object	✅	`GCSFileLoader`
Google Drive	Load documents from Google Drive (Google Docs only)	✅	`GoogleDriveLoader`
Huawei OBS Directory	Load documents from Huawei Object Storage Service Directory	❌	`OBSDirectoryLoader`
Huawei OBS File	Load documents from Huawei Object Storage Service File	❌	`OBSFileLoader`
Microsoft OneDrive	Load documents from Microsoft OneDrive	❌	`OneDriveLoader`
Microsoft SharePoint	Load documents from Microsoft SharePoint	❌	`SharePointLoader`
Tencent COS Directory	Load documents from Tencent Cloud Object Storage Directory	❌	`TencentCOSDirectoryLoader`
Tencent COS File	Load documents from Tencent Cloud Object Storage File	❌	`TencentCOSFileLoader`

Social platforms

The below document loaders allow you to load documents from different social media platforms.

Document Loader	API reference
Twitter	`TwitterTweetLoader`
Reddit	`RedditPostsLoader`

LangChain Docs

Document Loader	API reference
Telegram	`TelegramChatFileLoader`
WhatsApp	`WhatsAppChatLoader`
Discord	`DiscordChatLoader`
Facebook Chat	`FacebookChatLoader`
Mastodon	`MastodonTootsLoader`

Productivity tools

The below document loaders allow you to load data from commonly used productivity tools.

Document Loader	API reference
Figma	`FigmaFileLoader`
Notion	`NotionDirectoryLoader`
Slack	`SlackDirectoryLoader`
Quip	`QuipLoader`
Trello	`TrelloLoader`
Roam	`RoamLoader`
GitHub	`GithubFileLoader`

Common file types

The below document loaders allow you to load data from common data formats.

LangChain Docs

`Unstructured`	types)
`JSONLoader`	JSON files
`BSHTMLLoader`	HTML files
`DoclingLoader`	Various file types (see https://ds4sd.github.io/docling/)
`PolarisAIDataInsightLoader`	Various file types (see https://datainsight.polarisoffice.com/documentation?docType=doc_extract)
